YUANBO PANG

UC Berkeley EECS | Full-time Software / AI (2026–2027)

yuanbopang@gmail.com · (+1) 408-460-7526 · LinkedIn · GitHub

Education

University of California, Berkeley — B.S. EECS, GPA 3.762/4.0 (in-major 3.811) *Expected Dec 2026*

Stanford University (Summer) — CS 229: Machine Learning *Summer 2025*

De Anza & Foothill Colleges — A.S. Computer Science, GPA 4.0/4.0 *2023 – 2025*

Skills

Languages: Python, C++, TypeScript, SQL

ML / CV: PyTorch, computer vision, multi-object tracking, YOLO, SAM2, optical flow, LLMs

Agentic systems: agent frameworks/harnesses, tool-use & MCP, browser/desktop automation

Agent eval / RL envs: benchmarks, verifiers, automated grading, sandboxed task environments

Systems: Node/Hono, FastAPI, Postgres, Redis, Docker, Modal, GCP, CI/CD, Linux, React, Tauri, AWS basics

Experience

Research Assistant, Berkeley RDI / BAIR (Prof. Dawn Song) *Oct 2025 – Present*

Co-first author, Agents' Last Exam (ALE) — arXiv:2606.05405 agents-last-exam.org

- Co-first author of ALE (1K+ tasks, 55 subdomains): led the task pipeline and auto-scoring that turns expert agentic workflows into runnable VM tasks (`load`/`start`/`evaluate`), including computer-use settings with browser/desktop automation.
- Ran sandboxed agent evaluation on GCP (container/VM runners); collaborate with frontier model teams (OpenAI, Google, Anthropic) on agent evaluation via ALE.
- Built cross-domain eval/reward environments (hash, tabular, geometric, visual, behavioral) for automatic scoring and RL post-training without hand labels.

Founder, Equile — The Dry Lab for AI Scientists *Apr 2026 – Oct 2026*

equile.tech TypeScript, Hono, Postgres, Modal, Docker

- Built the control plane for agentic workflows in isolated sandboxes: sessions, encrypted auth, event streams, and disposable Modal workers so agents can be scheduled like model inference.
- Implemented multi-harness agent contracts (Claude Code, Codex, Cursor, custom Docker): one session API, tool/MCP I/O, snapshot pause/resume.
- Built background run scheduling (atomic claims, lease reclaim) and an SDK/CLI exposing sandboxed agents as an inference-style API.

URAP Research Assistant, Prof. Avideh Zakhor, UC Berkeley EECS *Spring 2026 – Present*

UAV-to-UAV detection & tracking github.com/yuanboP/URAP2026

- Built a PyTorch system for UAV-to-UAV tiny-object detection and multi-object tracking under ego-motion (YOLO, optical flow, SAM2-style tracking).
- Built train/eval pipelines; reproduced TransVisDrone/AOT baselines; closed-loop runs feed vision scores into RL training. Targeting CVPR.

Robotics AI Engineering Intern, Starbot *Nov 2025 – Mar 2026*

- Led VLA + agentic workflow integration for robot planning and control; shipped a computer-to-delivery robot system demoed at CES 2026.

Software Engineering Intern, AI Platform — Geopogo *Fall 2025*

- Shipped production image/video generation for architecture demos: React/TypeScript, FastAPI, Gemini + video APIs, Firebase auth, credits, and Vercel CI/CD.

Other Products

OpenCache: multi-engine AI coding desktop (Tauri/React) with Equile agent-framework connectors and usage ledger.

Context8: multi-tenant hybrid search/memory API for agent workflows (FastAPI, pgvector, Elasticsearch, Docker).

Awards

HackMIT Modal Sponsor Prize (2025); Smartest AI Agent, HackMIT (2024)
