YUANBO PANG

UC Berkeley EECS | Full-time ML / AI (2026–2027)
yuanbopang@gmail.com · (+1) 408-460-7526 · LinkedIn · GitHub

Education

University of California, Berkeley — B.S. EECS, GPA 3.762/4.0 (in-major 3.811) *Expected Dec 2026*

Stanford University (Summer) — CS 229: Machine Learning *Summer 2025*

De Anza & Foothill Colleges — A.S. Computer Science, GPA 4.0/4.0 *2023 – 2025*

Skills

Languages: Python, C++, TypeScript, SQL
ML / CV: PyTorch, computer vision, multi-object tracking, YOLO, SAM2, optical flow, LLMs, VLA
Agentic systems: agent frameworks/harnesses, tool-use & MCP, browser/desktop automation
Agent eval / RL envs: benchmarks, verifiers, automated grading, sandboxed task environments
Systems: Docker, Modal, GCP, FastAPI, Postgres, Redis, multi-harness runtimes, Linux, CI/CD

Research & Experience

Research Assistant, Berkeley RDI / BAIR (Prof. Dawn Song) *Oct 2025 – Present*
Co-first author, Agents' Last Exam (ALE) — arXiv:2606.05405 agents-last-exam.org

- Co-first author of ALE (1K+ tasks, 55 subdomains): task pipeline + auto-scoring for agentic workflows as runnable VM tasks (`load`/`start`/`evaluate`), including computer-use with browser/desktop automation.
- Ran sandboxed agent eval on GCP (container/VM runners); collaborated with frontier labs (OpenAI, Anthropic, Meta TBD Lab) on agent testing via ALE (scorers, sandboxes; under lab guidelines).
- Built cross-domain eval/reward environments (hash, tabular, geometric, visual, behavioral) for automatic scoring and RL post-training without hand labels.
- First author of ALE-Replica (under review, CVPR 2027): reconstruction tasks scored on hidden suites against real-software oracles, with negative controls rejecting semantics-free shortcuts — reward signals clean enough to train on.

URAP Research Assistant, Prof. Avideh Zakhor, UC Berkeley EECS *Spring 2026 – Present*
UAV-to-UAV detection & tracking github.com/yuanboP/URAP2026

- Built PyTorch UAV-to-UAV tiny-object detection and multi-object tracking under ego-motion (YOLO, Action Bank, optical flow, SAM2-style); train/eval pipelines, baselines (TransVisDrone / Li-TETC / AOT), closed-loop vision scores for RL.

Equile — The Dry Lab for AI Scientists (independent side project) *Apr 2026 – Oct 2026*
equile.tech TypeScript, Hono, Postgres, Modal, Docker

- Built control plane for agentic workflows in sandboxes: sessions, multi-harness agent frameworks (Claude Code / Codex / Cursor / Grok), MCP/tool I/O, snapshot pause/resume, scheduled runs; SDK/CLI as inference-style API.

Robotics AI Engineering Intern, Starbot *Nov 2025 – May 2026*

- Led VLA + agentic workflow integration for robot planning/control; shipped computer-to-delivery stack; CES 2026 demo.

Software Engineering Intern, AI Platform — Geopogo *Fall 2025*

- Shipped production multimodal generation: React/TypeScript, FastAPI, Gemini + video APIs, Firebase auth, credits, Vercel CI/CD.

Other Products & Awards

Ludus (co-founder): dual-agent framework marketplace on Docker, vote/Elo.
Co-first author, ALE (arXiv:2606.05405); Inspire Fellowship, rednote — $100K, 6 selected worldwide (2026); HackMIT Modal Sponsor Prize (2025)
